

Naman Kumar Chaudhary

+91-8175811738 | [Email](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Technical Skills

Languages: Java, JavaScript (ES6+), TypeScript
Frontend: HTML5, CSS3, React.js, Next.js, Redux Toolkit, Tailwind CSS, Bootstrap
Backend: Node.js, Express.js, RESTful APIs, WebSockets, Socket.io, Redis
Database: MySQL, MongoDB, PostgreSQL
Testing & API Tools: Jest (Unit Testing), Postman, Hoppscotch
DevOps & Cloud: Docker, Kubernetes, CI/CD, AWS (EC2, S3), Git, GitHub

Education

Ajay Kumar Garg Engineering College
Bachelor of Technology in Computer Science and Engineering

Ghaziabad, India
Oct 2023 - May 2027

Kendriya Vidyalaya No.1 School
Class XII: 90%, Class X: 88%

Gorakhpur, India
Apr 2010 - Jun 2022

Professional Experience

Sirhaana
Technical Intern

Mar 2026 - Aug 2026

- Architected a group-based **PBAC (Permission-Based Access Control)** system with ALLOW/DENY override resolution, through **20+** granular permissions across **8** role groups
- Designed and maintained **RESTful APIs**, **TypeORM**, and **MySQL** across **19** relational entities, implementing **JWT** auth and **Redis**-backed OTP verification for Admin and Vendor flows
- Built and deployed containerized microservices using **Docker** and **GitHub Actions** CI/CD, integrating a **Gemini** image-generation pipeline with **S3/R2** object storage and idempotent boot-time recovery

The Spiritual Company
Full Stack Developer Intern

Jan 2026 - Mar 2026

- Designed a session-cart reconciliation system to handle concurrent **guest-to-authenticated-user transitions**, preventing cart data loss during login flows before launch
- Optimized **MongoDB** product and order queries using indexes and pagination, reducing unnecessary database reads and improving query efficiency for catalogue and transaction workflows
- Implemented **Redis** cache-aside caching with TTL-based expiration for frequently accessed product/catalog data, reducing repeated **MongoDB** reads and improving response latency for read-heavy endpoints

Technical Projects

Naulej | *React, MongoDB, AWS S3, Razorpay*

[GitHub](#) | [Demo](#) | Jan 2026 - Feb 2026

- Built a role-based **MERN** job platform with **20+** REST endpoints, implementing **JWT** authentication, **bcrypt** password hashing, **Google OAuth 2.0**, and custom middleware for Student/Recruiter authorization
- Engineered an AI-powered resume ATS checker that caches extracted PDF text and uses a single **GPT-4o-mini** call per analysis to evaluate resumes against job descriptions, returning match scores, missing keywords, and improvement suggestions
- Integrated **AWS S3** for secure resume storage using short-lived presigned URLs and implemented **Razorpay** checkout with server-side HMAC-SHA256 signature verification to validate payment callbacks

Finance Advisor & Expense Tracker | *React 19, TypeScript, Firebase*

[GitHub](#) | [Demo](#) | May 2026 - Jul 2026

- Built a **React 19/TypeScript** personal finance PWA with **Firebase Realtime Database**, using event-driven listeners to synchronize transactions, goals, and financial analytics in real time without page refreshes
- Engineered a resilient **Gemini**-based financial advisor with a **4-endpoint** fallback chain spanning API versions and models, automatically failing over when upstream endpoints return errors while generating advice from users' live financial data
- Implemented **Google OAuth**, email/password authentication, and password recovery with **Firebase Auth**, enforcing UID-scoped data isolation through Realtime Database security rules; shipped an installable PWA with service-worker caching and INR/USD/EUR/GBP multi-currency support

Achievements

Achieved **Guardian** rank on **LeetCode** and **2 star** rating on **CodeChef** through competitive programming contests

Solved **400+** DSA problems across **LeetCode**, **GeeksforGeeks**, and **CodeChef**

Relevant Coursework

Data Structures & Algorithms, Object-Oriented Programming, Database Management, Operating Systems, Computer Networks, System Design
